Airbnb API Updates

JULY 2018 · ISSUE 1

New integration tools and enhanced publishing features

We're excited to introduce Airbnb API Updates. Here we'll share new features, tools, and important news related to our API.

New tools

EVENTS DASHBOARD

Monitor your integration in real time

Spend less time troubleshooting and more time improving the user experience. Our new Events Dashboard provides visibility into your integration's health so you can proactively address connectivity issues.

[View your dashboard](#)

TEST SANDBOX

Build your integration safely

Introducing the Airbnb API Test Sandbox: A test application that closely mimics your live production app and allows you to safely test new code before deploying to production.

Publishing updates

INTEGRATION IMPROVEMENT

New listings now publish faster

For hosts who aren't already managing listings directly on Airbnb, new listings added through your software are now automatically published without the need to visit the Sync page.

NEW FEATURE

Merge and sync from your system

New API features can allow your users to merge existing listings and select sync settings directly in your system. No more navigating to Airbnb to publish, even when connecting to an existing account.

NEW FEATURE

Simplify listing registrations

Enable a seamless transfer of listing registration info to Airbnb in markets that require it. Add registration details directly in your system and automatically sync this data to Airbnb listings. This feature is live now for Japan and support for other markets will be released shortly.
